An Easy Guide to...

MOBILE PHONE PHOTOGRAPHY

1. CLEAN THE LENS
Dirt and grease can build up on your camera lens, which reduces the quality of your photograph. Before taking a picture, wipe the lens with a tissue or your sleeve.

2. USE NATURAL LIGHT
Daylight looks better than indoor light. If taking photos of people, consider whether you can do it outside.

3. DON’T ZOOM
On most camera phones you can ‘zoom’ in on the subject. Don’t do it! If the subject is too far away, move closer (if safe to do so).

4. SET THE FOCUS
To make sure that the subject of your photograph is in focus, on most camera phones you simply tap the screen where your subject is.

5. KEEP STILL
Keeping your camera still is particularly important in low light or at night – you will avoid blurry photos.

AND FINALLY... TAKE A VARIETY OF PICTURES.
See below for some examples.

Wide Shot | Close Up
-----------|---------
Objects    | Activities
Group Shot | Individuals
Man-Made Scenes | Natural Scenes
